RecyQ

ABOUT | DESIGN PROCESS | AUDIENCE | USER STORIES | USER FLOW | WIREFRAMES | DESIGN SYSTEM | UI DESIGN & RESULTS

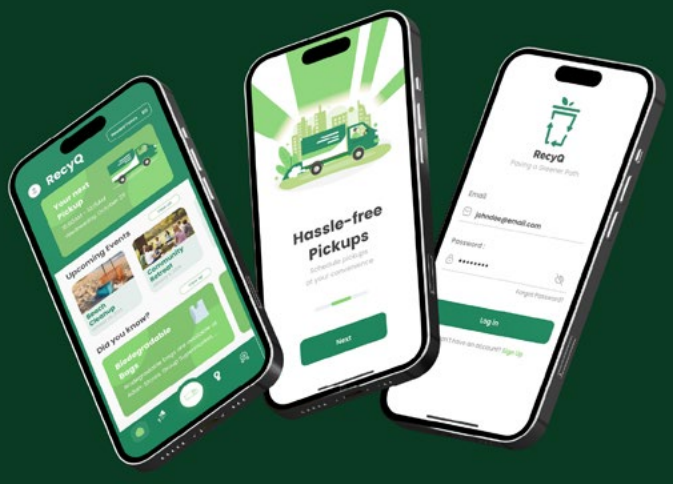

RecyQ

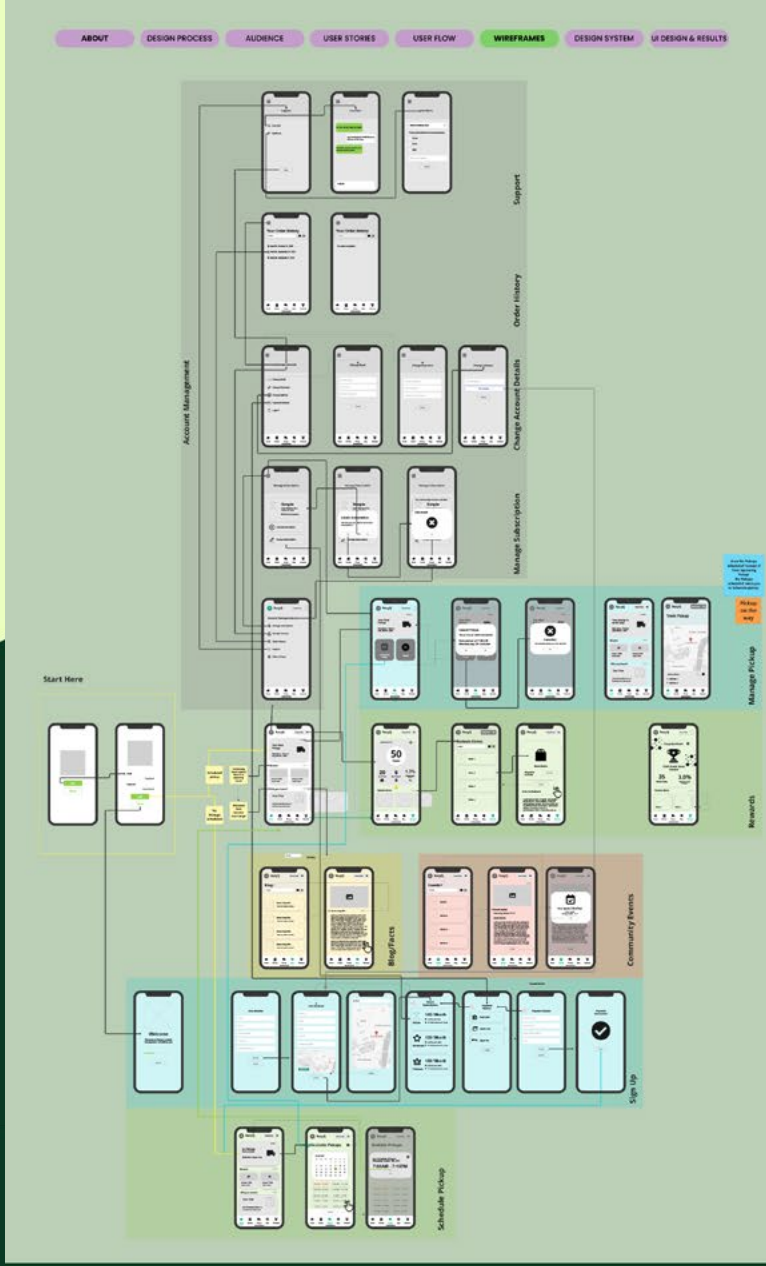

RecyQ is a waste management app concept designed to streamline and enrich the recycling experience for both households and businesses. The app enables users to schedule bin pickups, explore bite-sized educational content on sustainability, and earn rewards for eco-conscious actions. It also encourages community involvement through local environmental events and initiatives.

Description
The Qatar Law Forum has won a strong and unrivalled reputation for its ability to bring together global leaders in law. Previous Forums held in 2009 and 2012 also focused on the Rule of Law and were conducted under the patronage of His Highness the Emir of Qatar. For the 3rd edition of this forum I had the opportunity to create the branding for the event.

Graphic Design
Infographic
Web Development [Python, Flask]

Description
The launch was inaugurated by by His Excellency the Minister of Justice, Dr. Hassan bin Lahdan Al-Mohannadi, Mr. Faisal Rashid Al-Sahouti, CEO of QICDRC and Mr Saw Ken Wye, CEO of CrimsonLogic. By receiving tablets, and pressing launch respectively, a video detailing key facts about eCourt played and then the page was redirected to eCourt's main page. This was done by creating a small web application that triggers the launch once all 3 tablets have been pressed accordingly.

User Interface and User Experience

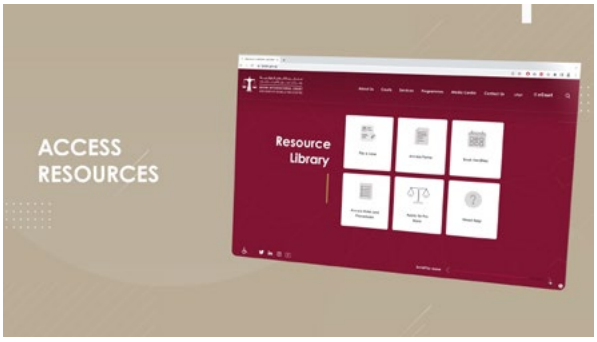

Description
I successfully enhanced the user interface and user experience of eCourt, a comprehensive case management system. Through intuitive navigation, streamlined workflows, and visually appealing design elements, I transformed the platform into a user-friendly and efficient tool, empowering legal professionals to effectively manage and navigate complex legal processes. The result was an enhanced user experience that improved productivity and client satisfaction.

The website has 9 pages and +800 images, detailing the company's robust portfolio work and clientele and comprising a seamless design that is user-friendly across all devices.

I was able to create a database of all the projects while allowing visitors to be able to filter them through and view them individually. I have also added a Careers page for visitors to browse and apply through.

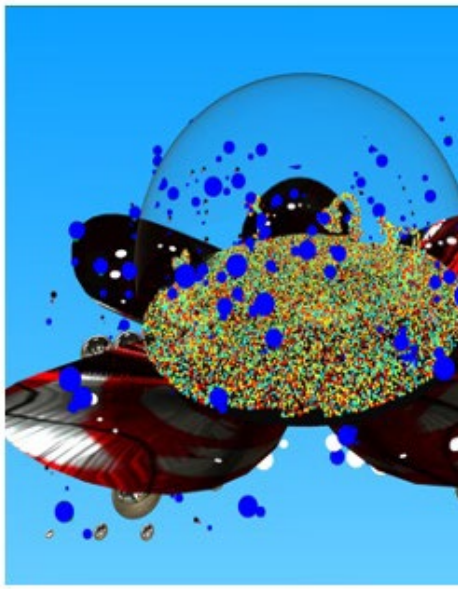

My Sculptures Last Forever

EDINBURGH UNIVERSITY PROJECT
2023

INTERACT

Media
Creative Coding
Three.JS
HTML / CSS
LiDar Scanning
Point Clouds

Description
The purpose of this project is to create an extension of Yumi Kusama's work into the digital space, and highlight how it can last lifetimes using an interactive medium. This will be done by creating an immersive website where users can drag a slider to visually see how long a sculpture piece can last. The project is an exploration of Kusama's style and extending a public space into a digital place where users can interact with it differently. The project uses point cloud data that are scanned using a phone.

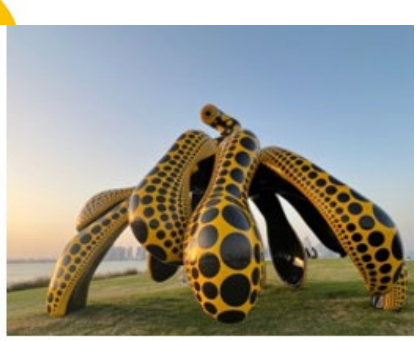

Globe

The addition of the glass hemisphere is to encompass the sculpture and give a similar feel to the infinity rooms that are created by Kusama.

Adding a hemisphere on the flower creates the impression of a sculpture blooming from within the flower, which serves the creative concept of the project.

Flower

Regenerated sculpture point cloud

TRY IT

Media
Creative Coding
Three.JS
HTML / CSS

Description
The goal of this project is to create a digital media piece that invokes curiosity for its users to be interested in the Arabic language.

This is done by letting users experiment with English words that live translate into Arabic. This gives them an immersive experience where they can interact with typography and see their words translated in real-time.

SQL
HTML / CSS /
Javascript / Three.JS

Description
I have designed this website platform to provide an interactive and dynamic experience for those who are interested in learning more about these diseases. The website is intended for a wide range of individuals, including medical professionals, students, researchers, and the general public who are seeking information about illnesses and their causes. Its user-friendly interface and comprehensive content aim to educate and empower users in their quest for knowledge about various medical conditions.

Function-Virus Information Page

We did not use 3D animation (such as gif) as a display of our virus because we felt that it could provide users with more interactive ways, such as zooming in, zooming out, and rotating. In the process of creating the model, we tried to restore the appearance of the virus as much as possible, and used a transparent appearance for viruses with complex internal structures, allowing users to see the internal structure of the virus more clearly.

We used Google's model-viewer code and compressed the model, which allows the browser to render faster without taking up time.

Function-Virus Slider: homepage

Load More button loads 3 elements from the database table of viruses. If there are no more elements it stops retrieving.

It creates the thumbnails for the sliders, retrieving the relevant image and 3d model that are stored on the server.

They are all named after the virus.id which is unique to every virus in the table.

The viewer is interactive and you can rotate the shapes and zoom in accordingly.

Models are compressed in .glb to load faster

Function – View All

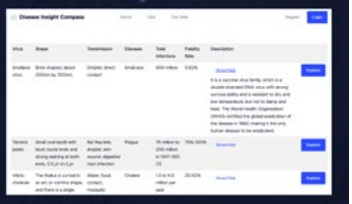

This page loads all the viruses and displays the content in a page.

Using Javascript you can show and hide the descriptions as they are lengthy and take up most of the space.

Explore links take you to the relevant virus page with the corresponding page

Access:

You can access this page from the footer, or from the homepage

Virus Page

This page loads content from:

- VirusTable Database
  - Used to render the page
- VirusName-Virus.id Database
  - Used in Javascript to load the map

- View Map button:
  - Auto-scrolls to the map section

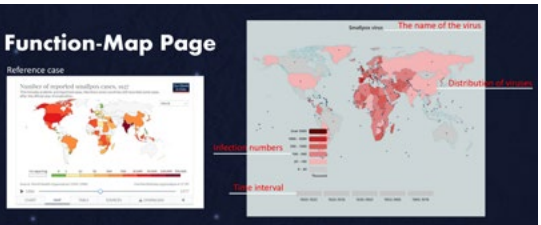

Access:

This page can be accessed from:

- Homepage – model viewer slider
- /viruses/ - buttons in the virus table.

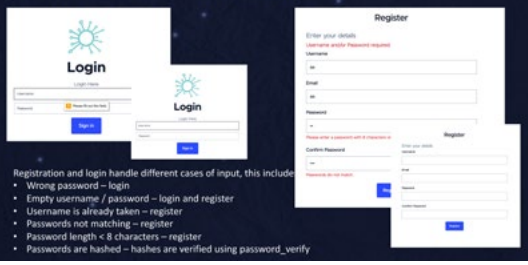

Function-Map Page

This page uses JavaScript and implements the function of visualizing the temporal and spatial distribution of viruses. Users can click on the time interval at the bottom to see the distribution of the virus around the world in different time periods. By the shades of color, users can visually see the spatial and temporal distribution of the virus and the extent of its spread. However, the current data on the website is not completely true and accurate. Due to the complexity of organizing the information in the database, our team summarized and adapted some data. The data was also displayed using JavaScript instead of connecting to the backend.

Function: Login / Registration

Registration and login handle different cases of input, this includes:

- Wrong password – login
- Empty username / password – login and register
- Username is already taken – register
- Passwords not matching – register
- Password length < 8 characters – register
- Passwords are hashed – hashes are verified using password_verify

Function: Users

Admin

- Username: admin
- Password: password

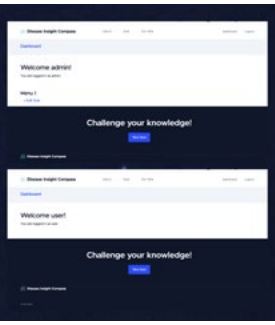

- Current Functionalities:
  - Can edit Quiz
  - Has access to dashboard
  - Quick access to dashboard

user

- Username: user
- Password: password

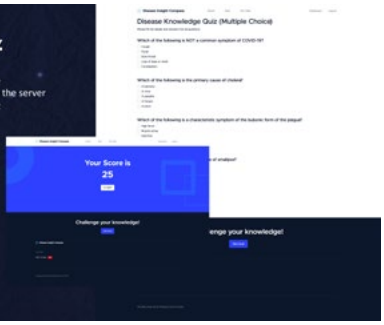

- **Current Functionalities:**
  - Has access to dashboard
  - Quick access to dashboard

See Future Developments for additional functionalities.

Function: Quiz

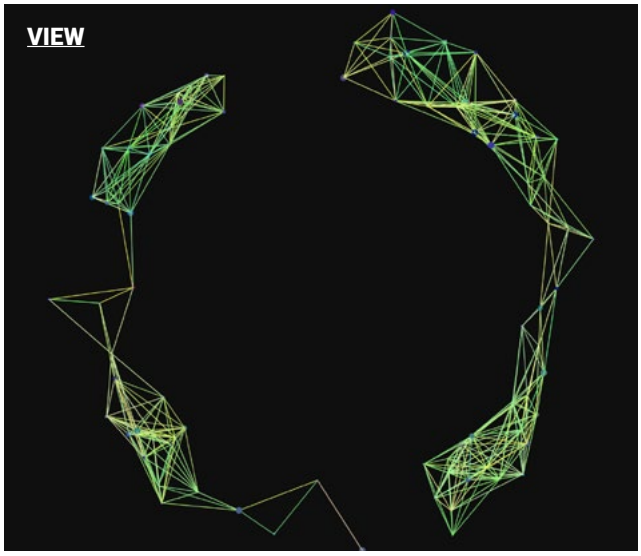

- Loaded from questions database
- Score is evaluated on finish from the server
- No need to login to take the quiz

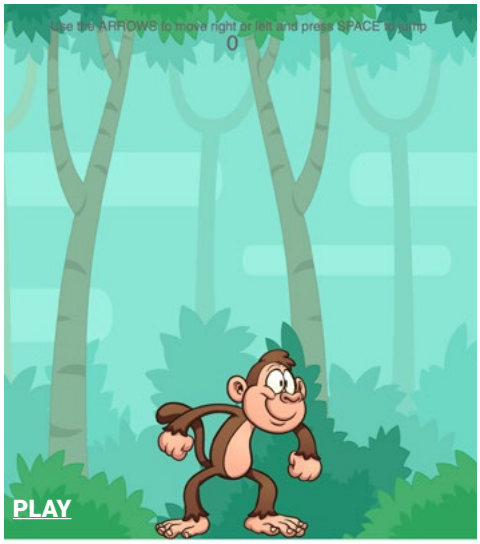

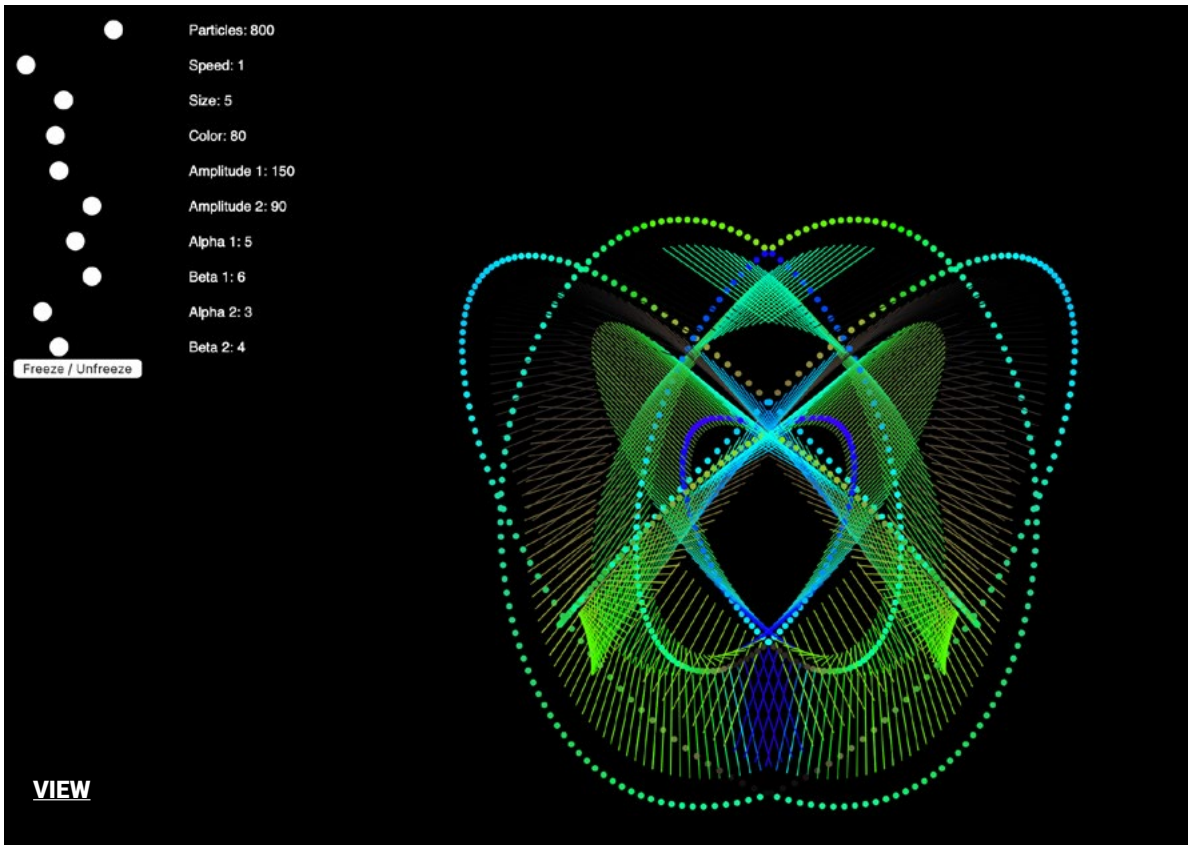

Function: Quiz – Admin

- Each quiz question can be edited by the admin
- Admin changes the text of the question and selects the right answer.

Beehive Truck

BEEHIVE
RECYCLING
2019

Sector
Recycling

Media
Graphic Design
Print Press
Photography

Location
Doha, Qatar

Description
Beehive Recycling have reached out and wanted a 'catchy and local-friendly' look for their recycling trucks. I wanted to go for something that showcases the insides of the truck that also gives the impression that the Beehive bins are always close and available to reach.

One side is cleverly hiding the side door of the truck with a wooden door extending the design even further in practice.
